Cambridge,
August 3, 1957

Dear Mr. Everett,

Please excuse my long delay in answering your kind letter of May 31. I have been all the time on a trip abroad and did not receive your letter until my return to Cambridge four days ago.

Perhaps it may take some time before I have read your paper as carefully as it deserves to be written. At the first glance, your paper seems rather attractive to me. I have always disliked the traditional treatment of measurement in Quantum Theory and it seems to me that measurement would be a type of fact outside of events.
different from all other physical facts. However, I shall reserve any judgment until I actually have studied your paper.

Anyway, I would like to receive from you your comments connected with the general philosophical and sociological problems which are connected with physical theory.

After Feb. 15, I shall be in New York, where I shall tend to the Columbia Division of Science during the Easter. Goodbye 1937/8.
Very much your,

Thay Frank
